

Course Title: Microcomputer Application I
Course Code: CSE-2402

Topic: Microsoft PowerPoint topics
(Animation, Slide Transition)

Mohammad Jahedul Alam Chy
Lecturer in CSE
Department of QSIIS

International Islamic University Chittagong (IIUC)

Lecture Agenda

What we will cover in this lecture

01

What is Animation?

02

Types of Animations

03

Adding & Customising Animations

04

What is Slide Transition?

05

Types of Transitions

06

Practice Questions & Lab Task

What is Animation?

Making your presentation come alive

Definition

Animation in PowerPoint refers to special visual effects applied to individual elements on a slide — such as text, images, or shapes — to control how they appear, disappear, or move during a presentation.

Why Use Animations?

- Highlight key information step by step
- Keep the audience focused and engaged
- Create a professional, polished look

Animation Pane:

Animations Tab → Animation Pane — shows all animations on a slide in order, lets you reorder, time, and preview them.

Applied Per Object

Each shape/text box can have its own animation

Timing Control

Set delay, duration, and trigger

Repeat Options

Loop animations as needed

Preview Button

Test before presenting

4 Types of Animations

The building blocks of PowerPoint animation

Entrance

Object appears on the slide
(e.g., Fade, Fly In, Zoom)

Object
Appears

Emphasis

Object draws attention
(e.g., Spin, Pulse, Grow/Shrink)

Draws
Focus

Exit

Object disappears from slide
(e.g., Fade Out, Fly Out)

Object
Leaves

Motion Path

Object moves along a path
(e.g., Line, Arc, Loop)

Object
Moves

Pro Tip:

You can combine multiple animation types on a single object! For example, apply a Fade entrance, then a Spin emphasis, then a Fly Out exit — each triggered at different times.

How to Add Animation – Step by Step

Animating elements in PowerPoint

1

Select the Object

Click on the text box, image, or shape you want to animate.

2

Open Animations Tab

Click the Animations tab in the Ribbon at the top of the screen.

3

Choose an Animation

Click an animation in the gallery (Entrance, Emphasis, or Exit). Click 'More' to see all options.

4

Set Effect Options

Use Effect Options to choose direction (e.g., From Left, From Top).

5

Adjust Timing

Set Start (On Click / With Previous / After Previous), Duration, and Delay.

6

Preview & Reorder

Click Preview or open Animation Pane to check order and test your animations.

Animation Timing Settings

Controlling when and how fast animations play

Start Options

On Click

Animation starts when you click the mouse.
Best for step-by-step reveals.

With Previous

Plays at the same time as the previous animation — good for simultaneous effects.

After Previous

Plays automatically after the previous animation finishes — great for automated sequences.

Duration

Very Fast:	0.5 seconds
Fast:	1 second
Medium:	2 seconds
Slow:	3 seconds
Very Slow:	5 seconds

Delay

No Delay:	0 seconds — plays immediately
Short Delay:	0.5–1 s — slight pause
Long Delay:	2–5 s — noticeable pause
Custom:	Type any value in seconds

Trigger

Bookmark:	Trigger at a video bookmark
Shape Click:	Start when specific shape is clicked
Animation Pane:	Manage all triggers in one place

Animation Examples

Common use-cases in real presentations

Business Report

Scenario:	Presenting quarterly sales data to management
Animation Used:	Fly In from Left on each bullet point (On Click)
Why It Works:	Lets presenter discuss each point before showing the next

Tutorial Slide

Scenario:	Explaining a 5-step process to students
Animation Used:	Appear on Numbered Steps (After Previous + 0.5s delay)
Why It Works:	Students follow along step-by-step without distraction

Title Reveal

Scenario:	Opening title slide of any presentation
Animation Used:	Zoom on title text (With Previous), Fade on subtitle
Why It Works:	Creates a dramatic, professional first impression

Warning Badge

Scenario:	Drawing attention to an important warning
Animation Used:	Pulse (Emphasis) repeated 3 times, On Click trigger
Why It Works:	Badge pulses to draw the eye exactly when needed

What is a Slide Transition?

Moving between slides with style

A slide transition is a visual effect applied to an entire slide when it appears or leaves during a presentation. Unlike animations (which affect individual objects), transitions affect the whole slide.

Animation

- ✓ Applied to individual objects (text, images)
- ✓ Found in: Animations Tab
- ✓ Controls how objects appear, move, or disappear
- ✓ Does NOT affect the whole slide
- ✓ Can have multiple per slide

VS

Transition

- ✓ Applied to the whole slide
- ✓ Found in: Transitions Tab
- ✓ Controls how slides enter the screen
- ✓ One transition per slide
- ✓ Can set duration and sound

Types of Slide Transitions

PowerPoint organises transitions into 3 categories

Subtle

None

Cut

Fade

Push

Wipe

Split

Reveal

Random Bars

💡 *Best for professional, clean presentations*

Exciting

Dissolve

Checkerboard

Blinds

Clock

Ripple

Honeycomb

Flash

Shred

💡 *Great for creative, dynamic presentations*

Dynamic Content

Pan

Ferris Wheel

Conveyor

Rotate

Window

Orbit

Fly Through

💡 *Keeps specific content visible across slides*

Best Practice:

Use Subtle transitions (especially Fade or Push) for academic and business presentations. Reserve Exciting transitions for informal or creative work.

How to Add a Slide Transition

Step-by-step guide

1

Select the Slide

Click the slide you want to apply a transition to in the Slides panel (left side).

2

Click Transitions Tab

In the Ribbon, click the Transitions tab to open the transition gallery.

3

Pick a Transition

Click any transition from the gallery. A live preview will immediately play on the slide.

4

Effect Options

Click Effect Options to choose direction or variant (e.g., From Left, Horizontal).

5

Set Duration & Sound

Under Timing, adjust Duration (how fast) and optionally add a Sound effect.

6

Apply to All (Optional)

Click Apply to All to use the same transition on every slide — great for consistency.

Slide Transition Settings Diagram

All the options in one view

Practice Questions

Test your understanding

Q1

Short Answer

What is the difference between an Animation and a Slide Transition in PowerPoint?

Q2

Short Answer

Name and describe the 4 types of animations available in PowerPoint.

Q3

MCQ

A student wants their bullet points to appear one at a time as they click. Which animation Start option should they use? A) With Previous B) After Previous C) On Click D) Auto

Q4

Short Answer

Which category of transitions would be most suitable for a formal university assignment presentation, and why?

Q5

True/False

True or False: You can apply multiple animations to a single object in PowerPoint.

Q6

Short Answer

How would you make ALL slides in a presentation use the same transition without applying it manually to each slide?

Lab Task — Hands-On Practice

Duration: 30–45 minutes | Individual Task | Submit as .pptx file

Task Brief:

Create a 6-slide PowerPoint presentation on the topic: "My Favourite Season" — applying animations and transitions as instructed below.

Slide Requirements

- ◆ Slide 1: Title slide with your name
- ◆ Slide 2: Introduction (3 bullet points)
- ◆ Slide 3: Season description (with image)
- ◆ Slide 4: Activities you enjoy (list)
- ◆ Slide 5: Weather data (simple table)
- ◆ Slide 6: Conclusion + thank you

Animation Requirements

- ◆ Apply Fly In (Entrance) to the title on Slide 1
- ◆ Apply Fade (Entrance) to all bullet points on Slide 2 — On Click
- ◆ Apply Spin (Emphasis) to the image on Slide 3
- ◆ Apply Appear one-by-one to the list on Slide 4
- ◆ Apply a Motion Path to any element on Slide 5
- ◆ Use Animation Pane to check order on at least one slide

Transition Requirements

- ◆ Slide 1 → 2: Use Push transition
- ◆ Slide 2 → 3: Use Fade transition
- ◆ Slide 3 → 4: Any Exciting transition
- ◆ Slide 4 → 5: Use Wipe transition
- ◆ Slide 5 → 6: Use Morph or Zoom transition
- ◆ Set 2-second duration on ALL transitions

Marking: Slides (20 pts) + Animations (40 pts) + Transitions (30 pts) + Creativity (10 pts) = 100 pts

Key Takeaways

Animations affect individual objects on a slide
— Entrance, Emphasis, Exit, Motion Path

Use Subtle transitions (Fade, Push) for professional/academic work

Use On Click, With Previous, or After Previous to control when animations play

Animation Pane lets you view, reorder, and time all animations on one slide

Transitions affect the whole slide as it enters — Subtle, Exciting, or Dynamic Content

Always preview animations and transitions before presenting to check order and timing

Thank You

Any Questions?
