

Course Title: Microcomputer Application I
Course Code: CSE-2402

Topic: Microsoft Word topics
(Picture, Clip-art and object, Drawing, Text box and shapes)

Mohammad Jahedul Alam Chy
Lecturer in CSE
Department of QGIS

International Islamic University Chittagong (IIUC)

01. Pictures

Photographic elements
and visual formatting.

Inserting Pictures

Accessing the Toolbar

To add pictures, go to the **Insert Tab > Pictures**.

- **This Device:** Photos stored on your computer.
- **Stock Images:** High-quality curated library.
- **Online Pictures:** Bing-powered web search or Generated pictures or drive pictures

Text Wrapping: The 7 Modes

Text Wrapping determines how text flows around an image, shape, or object in a Word document.

It controls the interaction between the image's boundary and the surrounding text.

Logical Layout Control

Determines how text interacts with the image boundary:

1. **In Line with Text** – The image is treated like a text character; text appears above and below.
2. **Square** – Text wraps around the rectangular boundary of the image.
3. **Tight** – Text follows the contours of the image closely.
4. **Through** – Text flows through transparent areas of the image (for irregular shapes).
5. **Top and Bottom** – Text appears only above and below the image, not on sides.
6. **Behind Text** – Image appears behind the text; text is overlaid.
7. **In Front of Text** – Image appears on top of the text, possibly covering it.

Picture Formatting Options

After selecting a picture, Picture Format Tab appears.

Options include:

- Corrections: Adjust brightness & contrast
- Color: Recolor the picture
- Artistic Effects: Apply effects like blur, glow, pencil sketch
- Compress Pictures: Reduce file size
- Crop: Remove unwanted parts

Example Diagram: Before/after brightness adjustment

Resizing Pictures

- Resize by dragging corners (maintains aspect ratio)
- Resize by dragging sides (may distort image)

Cropping Pictures

- Crop to remove unwanted parts
- Steps:
 1. Select picture → Picture Format → Crop
 2. Drag black crop handles
- Example: Crop a landscape photo to highlight only the mountains

Adjusting Picture Position

- Move picture anywhere in document
- Use Position button → predefined positions like Top Right, Center, etc.
- Use Wrap Text for better integration with text

Compressing Pictures

- Reduces file size for sharing or email
- Steps: Picture → Compress Pictures → Choose resolution (e.g., Email, Screen, Print)
- Retains quality for intended purpose

Applying Picture Styles

- Predefined styles in Picture Format → Picture Styles
- Examples:
 - Rounded corners
 - Shadow effects
 - Reflections
 - 3D effects

Quiz: Picture Management

Question 1:

You want text to flow around the exact contours of an irregularly shaped bottle image. Which wrapping mode should you use?

Answer: Tight wrapping mode.

Question 2:

Your document is 50MB and won't send over email. Which command under 'Picture Format' helps solve this?

Answer: Compress Pictures.

Lab Task

- Insert a flower image
- Apply Square text wrapping
- Resize to 5 cm width maintaining aspect ratio
- Apply Shadow effect

Show the diagram before and after formatting

Practice Questions

- **What are the main sources to insert pictures in Word?**
- **Explain the difference between In Line with Text and Tight Wrapping.**
- **How do you crop a picture in Word?**
- **Describe the steps to apply a shadow effect to a picture.**
- **What is the use of compressing pictures in Word?**
- **How do you insert an online picture and apply a reflection effect?**
- **Draw a simple diagram showing text wrapping around a picture.**

Clip-Art and Object

Introduction to Visual Elements in Word

- **Word supports graphical and embedded content.**
- **These elements improve:**
 - Readability**
 - Visual appeal**
 - Information clarity**
- **Two important insertable elements:**
 - Clip-Art**
 - Objects**

What is Clip-Art?

- **Clip-art = pre-made illustrations or icons. That is clip art is a collection of pre-made images that you can use in various documents, presentations, or projects.**
- **Used for:**
 - Educational materials**
 - Posters**
 - Reports**
 - Presentations**
- **In modern Word, clip-art is replaced by:**
 - Icons**
 - Stock Images**
 - Online Pictures**

Steps to Insert Clip-Art

- **Go to Insert tab**
- **Click Pictures → Online Pictures or Icons**
- **Search keyword (e.g., "education")**
- **Select image**
- **Click Insert**

Clip-Art Types

- **Icons**
- **Illustrations**
- **Stickers**
- **Cut-out images**
- **3D models**

What is an Object in Word?

- **An object is an external file inserted into Word. An object in MS Word is any non-text element—such as a picture, chart, table, equation, or embedded file—that can be inserted into a document to enhance it.**
- **Examples:**
 - Excel spreadsheet**
 - PowerPoint slide**
 - PDF**
 - Chart**
 - Audio file**

What is an Object in Word?

- **An object is an external file inserted into Word. An object in MS Word is any non-text element—such as a picture, chart, table, equation, or embedded file—that can be inserted into a document to enhance it.**
- **Examples:**
 - Excel spreadsheet**
 - PowerPoint slide**
 - PDF**
 - Chart**
 - Audio file**

Embedding vs. Linking

This determines how external data (e.g., an Excel Chart) behaves inside Word.

Embedded Object

A copy is stored in the Word file.

Changes in the source file **do not** update Word.

Benefit: File is self-contained.

Linked Object

Word points to the source file.

Changes in the source file

automatically update Word.

Benefit: Data always stays current.

Steps to Insert an Object

- **Go to Insert tab**
- **Click Object**
- **Choose:**
 - Create New**
 - Create From File**
- **Select file → OK**

Create New Object

Creates a new file inside Word.

Example:

- **Insert a new Excel sheet**
- **Enter data directly**
- **Close → Data stays embedded**

Embedded vs Linked Object

<i>Feature</i>	<i>Embedded</i>	<i>Linked</i>
File size	Larger	Smaller
Updates	Manual	Automatic
Dependence	Independent	Needs source file

When to Use Embedded Objects

Use when:

- **Sharing document with others**
- **Want permanent content**
- **Source file may be deleted**

When to Use Linked Objects

Use when:

- **Source file changes frequently**
- **Working with large data files**
- **Collaborative reports**

Comparison: Clip-Art vs Object

Feature	Clip-Art	Object
Type	Image	External file
Purpose	Decoration	Functional data
Editing	Limited	Full editing

Practice Questions

- **What is clip-art?**
- **Difference between embedded and linked object?**
- **Steps to insert object from file?**
- **Why does linked object update automatically?**
- **Give two real uses of objects in reports.**
- **Explain advantages of linking over embedding.**
- **Describe how Word communicates with embedded applications.**
- **Why should large datasets be linked instead of embedded?**

Tricky one:

Question: Data Integrity

You have a quarterly sales report in Excel. You want your Word document to automatically show the new totals every week without re-pasting. Should you Link or Embed?

Answer: Linked Object.

Question: Display

You want to include a 10-page PDF manual inside your Word file but don't want it to take up space. Which checkbox in the 'Object' window should you check?

Answer: Display as icon.

What is Drawing in MS Word?

Drawing in Word means creating graphical elements using built-in tools such as:

- **Shapes**
- **Lines**
- **Arrows**
- **Freeform sketches**

These tools allow users to design diagrams without external software.

Where to Find Drawing Tools

Location:

Insert → Shapes → Choose shape → Draw on page

Types of Drawing Elements

- **Lines**
- **Basic Shapes**
- **Block Arrows**
- **Flowchart Symbols**
- **Stars and Banners**
- **Callouts**

Drawing and Resizing Shapes

- **Steps:**
 - Insert → Shapes**
 - Choose shape**
 - Drag mouse to draw**
- **Tips:**
 - Hold Shift → Perfect shape**
 - Drag corners → Resize proportionally**

Formatting Shapes

- **When shape is selected → Shape Format tab**
- **Options:**
 - Fill color**
 - Outline color**
 - Shape styles**
 - Effects (shadow, glow, 3D)**

Adding Text to Shapes

- **Steps:**
Draw shape
Right-click → Add Text
Type inside
- **Example: Circle with text**

Practice Questions

- What are drawing tools in Microsoft Word?
- Give two examples of elements that can be inserted using drawing tools.
- Where can you find drawing tools in Word?
- Write the menu path used to draw a shape.
- Name any three types of shapes available in Word.
- What key should be held to draw a perfect square or circle?
- How do you resize a shape proportionally?
- Which tab appears when a shape is selected?
- Name two formatting options available for shapes.
- How do you insert text inside a shape?

Practice Questions

- Explain why drawing tools are useful for visualizing ideas.
- Describe step-by-step how to draw a shape in Word.
- Why is holding the Shift key important while drawing shapes?
- What is the difference between fill color and outline color?
- Explain the purpose of shape effects such as shadow or glow.

What is a Text Box?

A Text Box is a movable container for text.

It allows text placement anywhere on the page.

Used for:

Side notes

Titles

Highlights

Labels

Insert Text Box

Steps:

1. Insert → Text Box
2. Choose style or draw manually

Type text

Example: Create a highlighted note box for definitions.

Text Box Formatting

Options under Shape Format tab

Fill color

Border style

Shadow effect

Alignment

Text direction

Example:

A yellow text box with bold title and shadow effect.

What are Shapes?

Shapes are graphical elements used to create diagrams.

Types:

Rectangles

Circles

Arrows

Flowchart symbols

Callouts

Insert Shapes

Steps

Insert → Shapes → Select shape → Drag mouse

Tip: Hold Shift to draw perfect shapes.

Formatting Shapes

After selecting shape → Shape Format tab

Tools:

- **Shape Fill** → color inside
- **Shape Outline** → border
- **Shape Effects** → shadow, glow, 3D
- **Arrange** → position & alignment

Practice Questions

Basic

- What is a text box in Word?
- Where is the Shapes option located?
- How do you draw a perfect circle?
- Name two shape formatting options.
- How do you add text inside a shape?

Intermediate

- Explain the difference between Shape Fill and Shape Outline.
- Describe steps to insert a text box and apply color.
- Why are shapes useful in reports?
- How do you align multiple shapes?
- What is the purpose of arrows in diagrams?

Practical Tasks

- **Create a text box with blue background and white text.**
- **Draw three shapes and align them horizontally.**
- **Design a simple flowchart using shapes.**
- **Insert a callout shape and write a note.**
- **Combine a shape and text box into one diagram.**

Lab Task-1

Task

Create a one-page document titled “Environmental Awareness” that includes:

- One picture from your device
- One online image or icon (clip-art)
- Text wrapping applied
- Caption under image

Instructions

- Insert a title and center it.
- Insert a picture from your computer.
- Apply:
 - Square text wrapping
 - Shadow effect
 - Resize proportionally
- Insert one online image/icon related to environment.
- Add caption below both images.
- Save as: Lab1_Pictures.docx

Lab Task-2

Task

Create a document titled “Student Result Report” that contains:

- **One embedded Excel table**
- **One linked object file**
- **Description text**

Instructions

- **Type heading.**
- **Insert → Object → Create New → Excel Worksheet.**
- **Enter marks for 5 students.**
- **Format table.**
- **Insert → Object → Create from File → insert any PDF or document.**
- **Add explanation text describing both objects.**

Lab Task-3

Task

**Design a Process Diagram for:
“Online Course Registration”**

It must include:

- At least 5 shapes**
- Arrows connecting shapes**
- One text box description**
- Proper alignment**

Instructions

- **Insert shapes for steps.**
- **Add text inside each shape.**
- **Connect shapes using arrows.**
- **Align shapes evenly.**
- **Add a text box explaining the process.**
- **Save as: Lab3_Diagram.docx**

Thank You
